

# One easy step to decarbonization

ECO ORIGIN™ brings you certified low-carbon industrial gases produced using 100% renewable energy.

# We're proud to partner with you on your decarbonization journey.

You are concerned about climate change, and so are we. Your challenges motivate us to find solutions that contribute to the decarbonization of the industry. This is why we created ECO ORIGIN™, a portfolio of low-carbon gases. Those are produced with 100% renewable energies, their transport is optimized while residual emissions are compensated. ECO ORIGIN™ is a simple step in the journey to reduce the carbon footprint of your supply chain.

## MOLECULE

Gas molecules that do not contribute to the greenhouse effect.

Air gases (oxygen, nitrogen, argon) come from the the separation of ambient air.

## ENERGY

Low-carbon processing thanks to renewable energy usage.

100% of renewable energy - via Guarantees of Origin - is used to process our gas (air separation, gas purification and liquefaction).

## TRANSPORTATION

Reduced emissions thanks to the use of alternative fuels & logistics optimization.

Residual emissions are compensated via Gold Standard Foundation or Plan Vivo projects.

## Gases produced from natural air

With ECO ORIGIN™ oxygen, nitrogen and argon:

- Reduce your scope 3 emissions
- Reduce your own products' carbon footprint

*PCF reduction > 70%  
Reduced scope 3*

## Your climate contribution is measured & verified

The ECO ORIGIN™ methodology and calculations are verified yearly by a third party (ISO 14021).

You receive an annual attestation summarizing the CO<sub>2</sub> avoided and the Carbon Footprint of the Product (so called "CFP", verified ISO 14067) of your gas, enabling you to meet international reporting standard quickly and easily.
